

WWW.ZSPEED.COM

Choosing the right clutch for your application.

Choosing the correct clutch for your needs is our #1 priority.

If you are unsure about which to choose, please contact us VIA email or phone and we can help.

For 90% of cars our Stage 1 or 2 kits are the perfect choice for your Street driven car. Over clutching your car is one of the biggest mistakes made.

Higher Stage kits and puck style clutches will normally wear faster and be harder to drive than a lighter stage kit.

A proper clutch should be the clutch that is closest to the TQ rating of your car with some over head.. (see our TQ ratings listed with the clutches)

Do not confuse RWTQ (Torque at rear wheels) with Horsepower. Clutches hold torque and the RWTQ rating should be used when choosing. Never choose clutch by a HP rating.

Stages

Everyones "Stages" are different, so here is how we spec or "stages" for our clutches.

Our stage 1 and 2 kits will fit the bill for most cars, These kits will drive great and hold up just as well as a higher stage kit.

Stage 1 Full Face Organic

Your car is totally stock with maybe just an intake and exhaust and you prefer stock feel.

Stage 2 Full Face Organic

Our #1 selling kit

You have Mild to Full bolts ons/tune

This kit will have great grab when needed and drive fantastic on the street.

Stage 3 Full Face Organic

You are Boosted and need to hold higher power than our Stage 2 recommended TQ levels offer, the stage 3 will hold it down and will be streetable and agile for daily use although it will have a shorter/quicker engagement window at the pedal it is still mostly smooth and easy to drive.

Stage 4 Ceramic Pucks

This is where clutches start to get very grabby and harder to street drive but may be needed to hold your high powered beasts' power down. These ceramic puck kits have a much shorter engagement window but will hold high amounts of TQ, Also good for a person that drag races or drifts frequently and needs quick clutch lockup and quick action at the pedal.

These are the basics, sure, some applications may require a different set-up and ZSpeed can help, just contact us if you need help choosing.

ZSpeed Offers a full line of High Quality kits that will work for any application.
